EDUCATION

American School of Milan International Baccalaureate HL: Physics, Computer Science, Economics SL: Math AA, French Abinitio, English LL	Milan Italy	2024 - Present
--	--------------------	-----------------------

Oxford Royale Engineering: Civil, Mechanical and Electrical	Oxford, England	Summer 2025
---	------------------------	--------------------

Examinations

SAT: 1360(math 660, english 700)

Duolingo: 135

WORK EXPERIENCE

<u>Borromeo de Silva</u> <i>3 week internship Software development</i>	Milano, Italy	Summer 2026
--	----------------------	--------------------

- Developed a 90's inspired racing game for Borromeo de Silva's yearly event with their partner [RaceService](#) called [TUTTOBENE](#). To check it out click this link: <https://tuttobenegame2026.vercel.app/>

<u>Pasqua Wines</u> <i>2 week internship Software & AI</i>	Verona, Italy	Summer 2025
--	----------------------	--------------------

- Developed an internal meeting room booking web app and a bespoke AI-powered podcast that summarizes company news and key developments in the wine industry for employees.

EXTRACURRICULARS & COMMUNITY ENGAGEMENT

Volunteer Experience

Francesco Rava Foundation & NPH Participated in a week-long service project, helping build a community bike shed to provide safe storage and support local transportation.	Dominican Republic	February 2025
--	---------------------------	----------------------

Tutoring Tutor younger students in physics, supporting concept understanding, problem-solving skills, and academic confidence.		2025 - Present
--	--	-----------------------

School Events Assisted with school event organization, including budgeting, food service, logistics, and attendee support.		2024
--	--	-------------

Activities

Astronomy Club Attend bi-monthly meetings to discuss astronomical phenomena, contemporary discoveries, and current space research. Develop scientific curiosity and critical thinking through regular engagement with astronomy topics.		2025 - Present
--	--	-----------------------

AI Club Explore artificial intelligence technologies, real-world applications, and responsible uses of AI. Study the fundamentals of large language models, including parameters, capabilities, and limitations.		2025 - Present
---	--	-----------------------

Coding Projects

AI Tools for Students

Lumostudio – First Desktop AI Tutor

Aug 2025 – Nov 2025

Founder & Solo Developer

- Developed a privacy-first desktop AI tutor for macOS and Windows using Rust and Tauri, enabling secure local file processing.
- Integrated hybrid LLM functionality through OpenRouter API for online use and Ollama for offline local model execution.
- Built a hardware-aware model downloader that recommended local LLMs based on users' device capabilities.

Zayno – AI Academic Operating System (<https://zaynoai.vercel.app/>)

Nov 2025 – Jun 2026

Founder & Solo Developer

- Founded and built a full-stack academic productivity platform using Next.js and Supabase to help students manage coursework, scheduling, and study workflows.
- Engineered a cost-optimized multi-LLM routing system with task-specific model selection and fallback tiers for reliability and API cost control.
- Developed an OAuth-based Google Workspace agent that analyzes syllabi, checks calendar conflicts, and automatically time-blocks study sessions.
- Built RAG-enabled file management, automated study tool generation, and GPA tracking features using pgvector and modern AI workflows.

Dawn – AI Personal assistant/employee (<https://dawn-assistant.vercel.app/>)

Jun 2026 – Present

Founder & Solo Developer

- Built a personal AI employee reachable over iMessage, WhatsApp, Telegram, and its own email address, running on a custom agentic harness built on the Vercel AI SDK with declarative agent specs, cost-tiered model routing, and per-account budget enforcement.
- Architected an inspectable memory layer inspired by Andrej Karpathy's LLM wiki concept: every person, project, and commitment is a human-readable page the user can read, edit, and revert, retrieved through hybrid full-text and vector search with scheduled consolidation and decay.
- Integrated 54 connectors and MCP servers across Gmail, Calendar, Drive, Slack, Notion, GitHub, and Linear behind a unified 69-tool surface with human approval gates on every outbound action.
- Shipped Dawn's own MCP server exposing 20 tools, letting ChatGPT, Claude, and Gemini natively query the user's memory, calendar, and email and delegate background work to Dawn.
- Designed a sub-agent architecture where each worker runs in an isolated context on its own model tier and returns only distilled findings to the parent, cutting main-context input tokens by 33%.
- Built LLM-judged evaluation suites from real delegated work and made beating them a prerequisite for shipping any prompt or model change, raising conversational quality from 44% to 92% and multi-domain reasoning from 33% to 83%.
-

Sports

Varsity Basketball - 2 years

Competing in ESC tournaments (Placed 3rd last year).

Varsity Golf - 2 years

Competing in ESC tournaments (Placed 1st last year as a team).
